

KUSHEEN DHAR

Bengaluru, India | +91-6006796002 | kusheendhar@gmail.com | [Linkedin](#) | [GitHub](#)

SUMMARY

Engineering graduate with hands-on experience in production system monitoring, translating business requirements into technical specifications, and cross-functional team collaboration across full-stack and AI-integrated systems.

EDUCATION

Nitte Meenakshi Institute of Technology - B.Tech, Computer Science and Engineering

2023 - 2027

CGPA: 8.6

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOPs)

AI / ML: LangChain, RAG, Hugging Face, Groq (Llama 3.1), ChromaDB, Agentic AI, LLMs

Full Stack: React, React Native, Spring Boot, Node.js, Express.js, REST APIs

Cloud, DB & Tools: AWS (EC2, S3, Route 53, Deployment), Cloud Computing, MongoDB, SQL, Git, Postman

EXPERIENCE

Full Stack Developer Intern (Java / AI Integration) - Akonzio AI

May 2026 - Present

- Built and deployed 2 client-facing production websites end-to-end on AWS (EC2, S3, Route 53) for 5 clients — Salons Blue Spa, Glen, Naturals, Lakmé, and Arbit Linkers — including custom domain integration and DNS configuration.
- Led development and deployment of the Goodness Glamour platform, integrating 2 AI-driven assistants (voice and chat), hosted on AWS from requirements through production release.
- Integrated an AI voice agent that handles appointment bookings and acts as a virtual service assistant, automating customer service workflows across 5 concurrent client engagements.
- Delivered live product demos across 5 client accounts, gathering requirements and iterating on features based on direct client feedback.
- Built full-stack features using Java backend services and React frontends, ensuring reliability and performance in production.

Full Stack Developer Intern - Jarurat Care Foundation

Dec 2025 - Apr 2026

- Developed a real-time Java Spring Boot chatbot backend serving 60-80 patients, with RESTful APIs, session handling, and LLM integration; monitored system performance daily and maintained 100% uptime via a custom automated health-check system, hosted on AWS/Render.
- Designed and rolled out automated workflows using Postmark and Meta for Developers APIs, reducing manual effort in patient communication pipelines.
- Contributed to system design, production debugging, and code reviews; managed the full deployment lifecycle.

PROJECTS

AccessScan - AI Accessibility Checker

JavaScript, Node.js, Pa11y, Gemini API, AWS

- Engineered a scalable REST API with async processing and automated WCAG accessibility scans, integrating the Gemini API for automated remediation suggestions.
- Hosted the full-stack app on AWS, with a CI/CD-driven workflow and a test suite ensuring stability under concurrent load.
- Owned end-to-end development and deployment of the platform, including a downloadable PDF report feature for exporting accessibility scan results and documentation.
- Optimized AI API usage with token-efficient prompt design and response caching, reducing redundant calls and controlling inference costs.

DevAssist AI - Developer Documentation Assistant

Python, LangChain, Groq, ChromaDB, Streamlit

- Built a RAG-based retrieval system with MiniLM embeddings and ChromaDB for semantic search over developer docs using Llama 3.1 via Groq API.
- Designed a stateful chat interface with session management and fallback mechanisms for high query reliability.
- Hosted the application on a Streamlit interface, providing an accessible, interactive front-end for querying developer documentation.

ChatX - Real-Time Chat Application

React Native, Express.js, MongoDB

- Architected a real-time messaging backend with low-latency delivery, JWT-based secure authentication, and an optimized DB schema for fast message retrieval.
- Implemented WebSocket-based communication using Socket.io for instant message delivery, along with live online/offline status indicators for a smoother user experience.

ACHIEVEMENTS & CERTIFICATIONS

- Solvify Hackathon - Rank 5: Algorithmic problem-solving using DSA and pattern recognition under competitive conditions.
- Special Recognition, DesignHackathon NMIT-Sparklab (Oct 2025): UI/UX design excellence with focus on usability.
- Certifications: Programming in Java (NPTEL), MongoDB Java Developer & MongoDB Admin (MongoDB University), Java (Infosys Springboard).

POSITION OF RESPONSIBILITY

NMIT Hacks - Hackathon Organizer, Tech Club, NMIT

2024 - Present

- Organized a 48-hour hackathon, mentored cross-functional teams, and coordinated end-to-end execution for 100+ participants.
